

What is claimed is:

1. A sticky loop having at least three panels said at least three panels each having a common edge one with respect to the next, and having one side of adhesive, where the panels are separated by perf fold hints and where the width of the base panel is wider than the two side panels and where the sum of the widths of the two side panels is greater than the width of the base panels so that when the side panels are folded one onto the other over the base, the panels adhere one to the other and thereby form a continuous loop of paper with adhesive on the entire outer surface, for attaching two leaves one to the other.
